

Photo Presentation Instruction Sheet

Our Photo Presentations

A Photo Presentation is a lovely way to personalise a funeral service and to celebrate the life of a loved one. At Dubock Funerals, we can arrange to produce a Photo Presentation to be played at a service for a reasonable fee. This is recommended to avoid any technical difficulties, which can arise when families produce their own photo presentations.

Family-Made Photo Presentations

Most major cemeteries require a USB stick with the photo presentation in an MP4 format. This must include the music embedded within the photo presentation. If you are unable to do this or unsure of anything, we would be happy to help. When in doubt, check with your arranger well before the service.

- Powerpoint Presentations are NOT accepted. Powerpoint presentations must be exported as a movie file before putting on a USB.
- If you have any difficulty rendering your presentation in the appropriate format please contact your arranger at least 24 hours prior to the service.
- To avoid disappointment we highly recommend testing the Photo Presentation at the chosen venue at least 24 hours prior to the service.

Tips for Photo Presentations

- We recommend that you do not use more than thirty-five photos for a standard three-minute song.
- It is often effective to include a combination of old and new photos that document your loved one's life, ordered chronologically.
- One song is often enough to provide a lovely tribute. We recommend using no more than two songs to maximise the effect of the presentation.
- If you have many photos of your loved one that you would like to present, we recommend that you save them to play at the wake (after the service) where friends and family can watch them, casually.
